

High-Performance Software Router

100+ Gbps performance with enterprise-grade routing features at the lowest total cost of ownership

Features

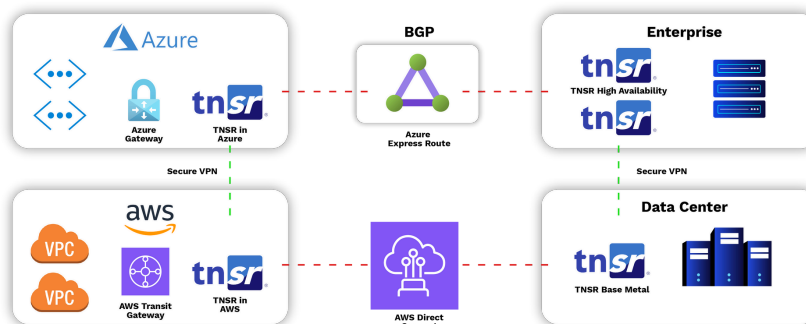

- **Advanced Routing Features:** BGP with BFD support, OSPF for IPv4 and IPv6, ECMP for load balancing, VRF for network segmentation, carrier-grade NAT, and more.
- **High-Performance VPN:** Secure site-to-site and remote access user VPN capabilities with IPsec and WireGuard.
- **Flexible Deployment:** You can deploy on AWS and Azure (Intel & ARM64), bare metal, virtualized in your data centers, or in hybrid environments.
- **Simple Management:** Familiar CLI or standards-based (NETCONF/RESTCONF) orchestration across tens, hundreds, or thousands of instances.

TNSR is a high-speed software router and VPN concentrator that delivers exceptional performance without compromising on flexibility or cost. Using powerful technologies like Vector Packet Processing (VPP), TNSR provides advanced routing and VPN features that meet the needs of businesses, service providers, and government organizations.

“With TNSR, we were able to get the job done for one-tenth the cost, with ten times more performance.”

Vishvas Chitale, CEO and CTO, [Chitale Dairy](#)

Use Cases

- **Complex Cloud Architectures:** Integrates seamlessly with sophisticated cloud setups, supporting intricate networking demands.
- **Multi-Cloud Deployments:** Facilitates robust networking across multiple cloud environments, ensuring consistency and performance.
- **High-Capacity Network Expansion:** Extends advanced network capabilities including routing, Network Address Translation (NAT), and Virtual Private Networks (VPNs) into cloud platforms and traditional data centers.
